THE PERFECT SOLUTION
FOR YOUR PROJECT

Spectrem® Simple Seal is a high-performance silicone extrusion designed to seal joints and gaps ranging from low to high movement conditions. For new construction and restoration projects, Simple Seal provides flexible, tear-resistant properties that will help to protect your building from moisture penetration for decades to come.

For those projects where standard sizes, profiles or colors won't work, Simple Seal can be customized to meet the challenges.

Simple Seal is readily available in a wide variety of colors and widths, but every project is different, and sometimes a custom solution is needed. When that is the case, Tremco can provide quick turn-around on custom widths, colors, thicknesses, profiles and textures.

Typical applications for Spectrem Simple Seal include window and door perimeters, EIFS joints, parapet walls, skylights, aluminum window seals, transition seals, curtain wall metal-to-metal joinery, sheet metal roof joints, penetrations, and many other gap and joint conditions. Simple Seal is adhered to substrates using Spectrem 1 or Spectrem 2* Silicone Sealant, creating a complete, compatible weatherproofing system.

* Contact Tremco Technical Services for a recommendation on the specific Spectrem Silicone Sealant to use for your application

Not the right size?

Having a hard time deciding on a width? Is the 3" material too narrow or 4" too wide? Do you have concerns that the nominal 2 mm thickness is not thick enough to last, or need thinner extruded material to conform to your complex substrate?

You're in luck. You can order custom width and custom thickness Simple Seal with production lead times of three weeks or less from time of placing your order.

Specialty width Simple Seal is available in any size ranging from 0.5 to 14" (13 to 355 mm).

Special order thickness Simple Seal ranging from .05 to .24" (1.3 to 6 mm) is available upon request.

Not the right color?

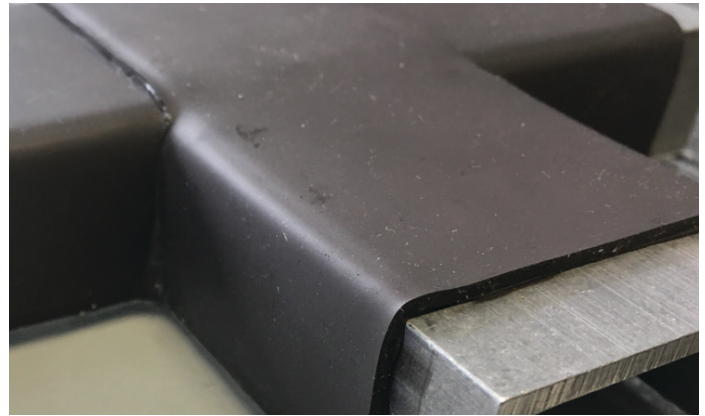

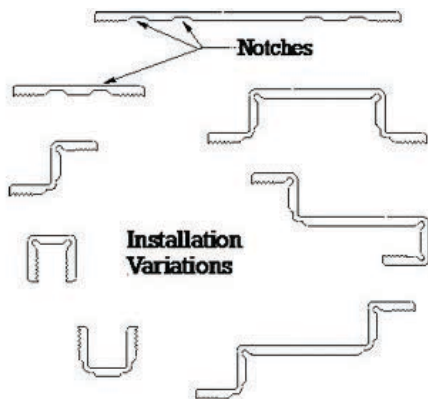

Cannot find the right color to match your building? Simple Seal is available in 7 stock and 11 special order colors. But there is no need to settle. Should none of these colors match your substrate, Simple Seal can be custom color matched to your liking. Just submit a color chip or small sample of your substrate, and we will provide a color matched silicone sample in short order for your approval.

CONTINUED ON BACK

Not the right shape?

Are you concerned that our flat extruded silicone extrusions will have difficulties conforming to your complex substrate? Simple seal is available with specially designed flex-points (notches) which allow it to bend readily around corners and can be installed in a variety of configurations. Simply submit a sketch with dimensions of the configuration and we will provide a design engineering drawing for your approval.

Texture does not match or does not blend into your building?

Don't like how the smooth matte surface of Simple Seal contrasts with the textured finish of your EIFS or stucco façade? Simple Seal can be manufactured with specialty textured finishes. Quarzputz, coarse & fine textures are readily available upon request. Simply ask your sales representative or customer service professional for a sample.

Still cannot find a design or customized Simple Seal product that fits your needs?
