Construction Products Group

Complete Building Envelope Protection

Total protection from water intrusion. From the elements. From caustic chemicals, deicers, thermal movement, seismic movement, fire and more. Tremco Construction Products Group (CPG) companies offer the most comprehensive suite of building envelope protection products available in the industry.

This singular focus ensures seamless compatibility of products and systems. More comprehensive warranties. Single-source accountability. And knowledgeable representatives in major markets across the country to help assess unique job requirements, ensure proper product selection, conduct jobsite tests and provide on-site assistance.

But we didn't stop there. We're continually pioneering advances in sealant and waterproofing technology and construction methods to enable products to set new performance standards, dramatically reduce production schedules and provide ever-increasing flexibility in project design and implementation.

We've built a reputation for developing better ways to get the job done.

The Tremco CPG Difference

A single-source building envelope means more for architects, designers, contractors and building owners alike – more comfortable, satisfied occupants or tenants, more efficient structures, and cost-effective operation for the long term:

Faster Construction Time

Lightweight, fast-curing and prefabricated products mean less occupant disruption, faster return to service, less revenue lost — and no call-backs.

Any Look You Want

A wide range of colors and finishes like brick, granite, metals, stucco and more provide maximum flexibility in your roof and façade aesthetic.

Stronger and More Resilient

Our systems are designed for maximum durability, many with service lives far surpassing that of competing systems.

Leak-Free Performance

Products provide maximum protection from air, moisture and thermal infiltration — and are performance tested in our one-of-a-kind Building Science Laboratory.

Cost Effective for the Long Term

A broad range of products can fit any project budget — but our energy efficiency and maintenance solutions can also help you ensure cost-effective ownership and operation for the long term.

Better Insulated

Industry-leading brands provide solutions for more efficient building construction and operation, and exceed strict energy codes for insulation.

One Point of Contact

Our products and systems are backed by industryleading warranties — all from a single point of contact. We can also help with everything from asset management to diagnostics to installer training.

Leading Edge Sustainability

Our building solutions help you meet green building standards like Net Zero, Living Building Challenge, Passive House and more.

	Description	Advantages	Best For / Systems
Waterstops			
Superstop	Superstop is a composite waterstop containing expandable, granular bentonite layered with a pressure sensitive adhesive on one side to be used in cold joints and around penetrations to prevent water migration.	Economical to benefit project costs Prevents water migration through construction joints, protecting against leakage	Cold joints Penetrations Salt and fresh water conditions
Crystalline Waterpi	oofing		
Permaquick® Crystalline Waterproofing	A crystalline waterproofing grout that reacts with water and lime present in concrete structures to halt the migration of water by forming crystallized chains that penetrate into the capillaries of the concrete.	Economical to benefit project costs Waterproofs the concrete itself without the addition of membranes, eliminating migration of water	Foundation walls Floor slabs Suspended and In-ground pools Parking garage floors
Flashing			
TREMproof® PUMA Flashing System	A multi-component liquid-applied system based on PUMA technology that system cures within 30 minutes, even in temperatures below freezing.	Strong adhesion to concrete and metal for versatile usage Cures within 30 minutes for quick return to service Can be installed in temperatures below freezing, expanding application times	Transitions of planes HRA waterproofing systems Urethane and PUMA base coats
Tremco DualFlex®	A reinforcing flashing that consists of a central strip of elastomeric SEBS rubber flanked on either side by an absorbent non-woven felt, which allows the flashing to easily integrate into waterproofing membranes while providing movement capabilities.	Easily integrates into waterproofing membranes for efficient use SEBS rubber central strip allows for movement, helping bridge cracks	Joints Transitions of planes HRA waterproofing systems Urethane and PUMA base coats
Drainage Mats - Ver	tical Applications		
TREMDrain™ NW	A two-layer drainage mat consisting of a polystyrene core and non-woven, needle-punched polypropylene fabric. TREMDrain NW provides an economical solution for single-sided subsurface drainage applications requiring a typical non-woven filter fabric bonded to a lower compressive strength and moderate flow capacity formed core.	Serves as a protection course and replacement for traditional pipe and stone drainage systems. Lower compressive strength Moderate flow capacity	Vertical walls less than 20 ft Backfilled Walls Blindside Walls
TREMDrain™ 1000 NW	Designed for single-sided subsurface vertical drainage applications requiring a typical non-woven filter fabric bonded to a high compressive strength and high flow capacity formed core.	Serves as a protection course and replacement for traditional pipe and stone drainage systems. High compressive strength High flow capacity	Vertical walls greater than 20 ft Backfilled Walls
TREMDrain™6000	A multi-composite prefabricated drainage material and protection board consisting of a formed polypropylene core covered on one side with a high strength, spun-bonded polypropylene filter fabric. TREMDrain 6000 MW is designed for single-sided subsurface vertical drainage applications requiring a typical non-woven filter fabric bonded to a high compressive strength and high flow capacity formed core.	Serves as a protection course and replacement for traditional pipe and stone drainage systems. High compressive strength High flow capacity	Vertical walls greater than 20 ft Backfilled Walls
TREMDrain™ Total Drain	Designed to provide a value engineered alternative to perforated pipe and aggregate subsurface drainage systems in applications requiring high strength and high flow capacity.	Integrated transition flange for easy connection to sheet drain products Serves as a replacement for traditional pipe and stone drainage systems.	Perimeter drain applications Backfilled Walls Blindside Walls
TREMDrain™ QSP	Designed specifically to reduce installation time and improve membrane curing time. The lightweight, easy-to-install panels offer economical drainage solutions saving contractors time and money.	Lightweight Panels set into liquid membranes Reduce installation time Improve membrane curing time over traditional drain mat	Fast tracked vertical applications with liquid applied membranes Backfilled Walls
Drainage Mats - Hor	izontal Applications		
TREMDrain™ S NW	Designed for horizontal drainage applications requiring a high compressive strength and moderate flow capacity. TREMDrain S NW uses a typical non-woven filter fabric and includes a protective backing film for added membrane protection.	Serves as a protection course and replacement for traditional pipe and stone drainage systems. Added backing film for added membrane protection High compressive strength Moderate flow capacity	Under Slab Split Slab
TREMDrain™ 1000 PF	Designed for single-sided subsurface vertical drainage applications requiring a typical non-woven filter fabric bonded to a high compressive strength and high flow capacity formed core. TREMDrain 1000 PF incorporates a protective backing film for added membrane protection.	Serves as a protection course and replacement for traditional pipe and stone drainage systems. Added backing film for added membrane protection High Compressive Strength High Flow Capacity	• Under Slab • Split Slab
TREMDrain™ 2000 NW	Designed for horizontal drainage applications requiring a high compressive strength and high flow capacity. TREMDrain 2000 NW uses a high strength Class 1 needle-punched, non-woven filter fabric with a protective backing film for added membrane protection.	Serves as a protection course and replacement for traditional pipe and stone drainage systems. Added backing film for added membrane protection	Split Slabs Plaza and Paver decks
TREMDrain™ 3000 NW	Designed for horizontal drainage applications requiring a high compressive strength and moderate flow capacity. TREMDrain 3000 NW uses a high strength Class 1 needle-punched, non-woven filter fabric and includes a protective backing film for added membrane protection.	Serves as a protection course and replacement for traditional pipe and stone drainage systems. Added backing film for added membrane protection High compressive strength Moderate flow capacity	Split Slab Planters
TREMDrain™GS	Designed specifically for Green Roof applications, the TREMDrain GS provides an economical solution for drainage, aeration, water storage, soil retention, root barrier, and waterproofing membrane protection in one easy lightweight product.	Aids in water storage and soil retention. Serves as a root barrier.	Vegetative Roof Systems Greenscapes where water retention is desired

A full line of coating systems for vehicular and pedestrian deck applications as well as coatings for specialty applications, including low-VOC, low-odor formulations ideal for occupied areas.

	Description	Advantages	Best For / Systems
Base Coats	Description	Auvantages	Dest For / Systems
Vulkem® 350	A durable single-component, polyurethane base coat that is cost effective and ideal for waterproofing concrete slabs, while protecting from water migration in the concrete substrate. Recoatable with other Tremco sealants and can be applied under any Vulkem topcoat or used under tile to provide waterproofing.	Low temperature application extends the season for applications Retains integrity even if substrate movement causes hair-line cracks of up to 1/16" (1.5 mm) Roller Grade and Self Leveling grades available	Pedestrian & vehicular decks Under tile Athletic surfaces Mechanical rooms Balconies
Vulkem® 350FC	Two-component, fast-curing, durable polyurethane base coat that offers protection for waterproofing concrete slabs and providing protection from water migration in the concrete substrate. Compatible with all Tremco urethane intermediate and top coats. (Currently only available in Canada.)	Low VOC to help improve surrounding air quality Fast curing which allows for a quick return to use of areas after application Retains integrity even if substrate movement causes hair-line cracks of up to 1/16" (1.5 mm)	Pedestrian & vehicular decks Athletic surfaces Mechanical rooms Balconies
Vulkem® 350NF	A durable single-component, polyurethane base coat that offers protection for waterproofing concrete slabs, while protecting from water migration in the concrete substrate. Quick curing and allows for quick turnaround of areas after application. It is also neighbor friendly and ideal for use in areas that need low odor applications and can be applied underneath any Vulkem topcoat or under tile.	Low VOC's and low odor are ideal for use in inhabited structures Retains integrity even if substrate movement causes hair-line cracks of up to 1/16" (1.5 mm) Roller Grade and Self Leveling grades available	Pedestrian & vehicular decks Window flashings Athletic surfaces Mechanical rooms Balconies Under tile
Vulkem® 360NF	A durable two-component, water cured, polyurethane base coat that is ideal for waterproofing concrete slabs, while protecting from water migration in the concrete substrate. It is also neighbor friendly and ideal for use in areas that need low odor applications. Recoatable and compatible with other Tremco sealants and expansion joints, which enhances waterproofing protection.	Low VOC's and low odor are ideal for use in neighbor-friendly, inhabited structures Can be used to slope decks and fill in low and spalled concrete when mixed with aggregate Retains integrity even if substrate movement causes hair-line cracks of up to 1/16" (1.5 mm)	Pedestrian & vehicular decks Athletic surfaces Mechanical rooms Balconies
Intermediate Coat	S		
Vulkem® 346	High performing, aliphatic, single component intermediate polyurethane wear coat loaded with aggregate to provide excellent impact, abrasion and chemical resistance. Vulkem 346 is recoatable to extend the service life of the coating system.	Fast curing allows for use of applied area 72 hours after installation UV-Stable to protect from the damage of the sun's rays	Vehicular decks
Vulkem® 950NF	A high performing, two component intermediate polyurethane wear coat that is neighbor friendly and ideal for use in areas that need low odor applications. This intermediate coat is loaded with aggregate for excellent impact, abrasion, and chemical resistance.	Low VOC's and low odor are ideal for use in inhabited structures Fast curing allows for use of applied area 72 hours after installation	Pedestrian decks Vehicular decks Mechanical rooms
Vulkem® 951NF	A high-performance two component polyurethane wear coat that is applied after the base coat has cured. The coat affords excelling abrasion resistance, UV stability and chemical resistance. It is also neighbor friendly and ideal for use in areas that need low odor applications.	Low VOC's and low odor are ideal for use in neighbor-friendly, inhabited structures Fast cure through time allows for use 12 to 24 hours after installation Excellent durability and UV resistance extend the useful life of pedestrian systems Recoatable and compatible with other Tremco sealants and expansion joints, which enhances waterproofing protection with full system compatibility	Pedestrian decks Vehicutar decks
Vulkem® Epoxy WC	A two-part intermediate epoxy wear coat loaded with aggregate that gives excellent impact and abrasion resistance. Vulkem Epoxy WC offers enhanced durability vs. urethane-only systems.	Compatible with all Tremco Vulkem base and top coats Low VOC's and low odor are ideal for use in inhabited structures Extended service life and warranty compared to urethane-only systems Superior aggregate retention Resistant to chemicals, salts, mildew, fungus, and other environmental contaminants	Vehicular decks High wear turning and drive lanes Ticket spitters Stadium/plaza decks Helical ramps
Top Coats			
Vulkem® 346	Single component polyurethane top coat that is applied after the intermediate coat has cured for use on vehicular decks. The top coat affords excellent abrasion resistance, UV stability and chemical resistance to complete the Vulkem Traffic Deck Coating System.	Fast curing, which allows for a quick return to use UV Stable to protect from the damage of the sun's rays Mildew and fungus resistance safeguards concrete surfaces against environmental contaminants	Vehicular decks
Vulkem® 351/351NF	Single component polyurethane top coat, which when used in conjunction with the recommended aggregate, creates a tough, aesthetically appealing, skid resistant, wearing surface that forms a UV resistant, strong interlaminate bond to the basecoat completing the Vulkem Traffic Deck Coating System.	• When used with aggregate, creates a tough, skid-resistant, wearing surface	
Vulkem® 950NF	A two-component polyurethane top coat that is applied after the intermediate coat has cured. The topcoat affords excellent abrasion and chemical resistance to complete the Vulkem Traffic Deck Coating System. It is also neighbor friendly and ideal for use in areas that need low odor applications.	Low VOC's and low odor are ideal for use in inhabited structures Mildew and fungus resistance safeguards concrete surfaces against environmental contaminants. Recoatable and compatible with other Tremco sealants and expansion joints, which enhance waterproofing protection with full system compatibility Fast curing allows for use of applied area 72 hours after installation	Vehicular decks Pedestrian decks Mechanical rooms
Vulkem® 951NF	A high-performance two component polyurethane top coat that is applied after the intermediate coat has cured. Ideal for pedestrian (medium duty) and vehicular (heavy duty) applications. The top coat affords excelling abrasion resistance, UV stability and chemical resistance to complete the Vulkem Traffic Deck Coating System. It is also neighbor friendly and ideal for use in areas that need low odor applications.	Low VOC's and low odor are ideal for use in neighbor-friendly, inhabited structures Fast cure through time allows for use 12 to 24 hours after installation Excellent durability and UV resistance extend the useful life of pedestrian systems Recoatable and compatible with other Tremco sealants and expansion joints, which enhances waterproofing protection with full system compatibility	Vehicular decks
NF = Neighbor-Frie	ndly SL = Self-Leveling R = Roller		

A full line of coating systems for vehicular and pedestrian deck applications as well as coatings for specialty applications, including low-VOC, low-odor formulations ideal for occupied areas.

	Description	Advantages	Best For / Systems
Pedestrian Systems		Autumages	Destroi / Systems
Vulkem® 350NF/351NF	Two-coat polyurethane pedestrian deck coating system that is designed for water- proofing concrete slabs and protecting occupied areas underneath from water damage. It cures to form a rubber membrane surface that provides a lasting and easy-to-clean coating. Ideal for areas with light and medium pedestrian traffic.	Low VOC's and low odor are ideal for use in neighbor-friendly, inhabited structures Aggregate-laden top can aid in wear and stip resistance Fast cure through time allows for use 24 hours after installation Mildew-and fungus-resistance safeguards concrete surfaces against contaminants Excellent durability and UV resistance extend the useful life of pedestrian systems Recoatable and compatible with Tremco sealants, which waterproofing protection	Plazas Recreation decks Balconies Athletic surfaces
Vulkem® 350FC/951NF	A two-coat polyurethane pedestrian deck coating system that is designed for waterproofing concrete slabs and protecting occupied areas underneath from water damage. It cures to form a rubber membrane surface that provides a lasting and easy-to-clean coating.	Fast cure through time allows for use 24 hr after installation. Mildew and fungus resistance safeguards concrete surfaces against environmental contaminants. Excellent durability and UV resistance extend the useful life of pedestrian systems Recoatable and compatible with Tremco sealants, which waterproofing protection	Plazas Recreation decks Balconies Mechanical rooms
Vulkem® 350NF/950NF or 951NF	A two-coat composite waterproofing system of tough-curing, liquid polyurethane consisting of Vulkem 350NF as a base coat and 950NF or 951F as a top coat designed to protect concrete slabs and occupied areas underneath from water damage. Protects concrete from the damaging effects of water, deicing salts, chemicals, gasoline, oils, and anti-freeze.	Low VOC's and low odor are ideal for use in neighbor-friendly, inhabited structures Mildew and fungus resistance safeguards concrete surfaces against contaminants. Recoatable and compatible with other Tremco sealant and expansion joints, enhancing waterproofing protection with full system compatibility Once cured forms rubber membrane that is lasting and easy to clean Excellent durability and UV resistance extend the useful life of pedestrian systems	Plazas Recreation decks Balconies Athletic surfaces Mechanical rooms
Vulkem® 360NF/950NF or 951NF	A two-coat composite waterproofing system of tough-curing, liquid polyurethane consisting of Vulkem 360NF as a base coat and 950NF or 951F as a top coat designed to protect concrete slabs and occupied areas underneath from water damage. Protects concrete from the damaging effects of water, deicing salts, chemicals, gasoline, oils, and anti-freeze.	Low VOC's and low odor are ideal for use in neighbor-friendly, inhabited structures Mildew and fungus resistance safeguards concrete surfaces against contaminants Recoatable and compatible with other Tremco sealant and expansion joints, enhancing waterproofing protection with full system compatibility Once cured forms rubber membrane that is lasting and easy to clean Excellent durability and UV resistance extend the useful life of pedestrian systems	Plazas Recreation decks Balconies Athletic surfaces Mechanical rooms
Vulkem® EWS Pedestrian	A waterproof traffic deck coating system that utilizes polyurethane-methacrylate (PUMA) technology, which is designed to protect concrete slabs and occupied areas underneath from water damage. PUMA technology delivers extreme durability while maintaining its crack-bridging characteristics, eliminating the need for reinforcing fabric. Protects against chloride, deicing salts, chemicals, gasoline, oils, and antifreeze. Ideal for stadiums, balconies, and pool decks.	Can be applied in temperatures as low as 14° F (-10° C), extending application windows Open to foot traffic within one hour after application, providing quick return to service Low VOC to help improve surrounding air quality Minimal downtime (approximately 30 to 45 min) between application coats, ideal for condensed construction cycles, even in cold temperatures Unique chemistry – bonds to itself to allow easy repairs	Stadiums Balconies Pool decks Pedestrian walkways Mechanical rooms
Vehicular Systems			
Vulkem® 350FC/951N- F/951NF	A modified polyurethane three-coat traffic deck coating system designed for water- proofing concrete slabs and protecting occupied areas underneath from water damage. Protects concrete from the damaging effects of water, deicing salts, chemicals, gasoline, oils, and anti-freeze. Also provides tenacious adhesion, extreme impact and abrasion resistance, and remarkable chemical stability.	Fast cure through time allows for use 24 hr after installation Mildew and fungus resistance safeguards concrete surfaces against environmental contaminant Excellent durability and UV resistance extends the useful life of vehicular systems Recoatable and compatible with other Tremco sealants and expansion joints, which enhance waterproofing protection with full system compatibility	Parking Decks Concrete Ramps
Vulkem® 350NF/346/346	A modified polyurethane three-coat traffic deck coating system designed for water- proofing concrete slabs and protecting occupied areas underneath from water damage. A fast cure-through that allows for return to use 72 hours after application. Protects concrete from the damaging effects of water, deicing salts, chemicals, gasoline, oils, and anti-freeze while also providing tenacious adhesion, extreme impact and abrasion resistance, and remarkable chemical stability.	UV, impact, abrasion, and chemical resistant helps to extend service life of coating system Mildew and fungus resistance safeguards surfaces against environmental contaminants Recoatable and compatible with other Tremco sealants and expansion joints, which enhance waterproofing protection	Parking Decks
Vulkem® 350NF/950N- F/951NF	A modified polyurethane three-coat traffic deck coating system designed for water- proofing concrete slabs and protecting occupied areas underneath from water damage. Protects concrete from the damaging effects of water, deicing salts, chemicals, gasoline, oils, and anti-freeze. Also provides tenacious adhesion, extreme impact and abrasion resistance, and remarkable chemical stability.	System component elastomeric properties helps bridge shrinkage cracks Low VOC's and low odor are ideal for use in neighbor-friendly, inhabited structures Midew and fungus resistance safeguards against environmental contaminants. Excellent durability and UV resistance extends the life of vehicular systems. Recoatable and compatible with other Tremco sealant and expansion joints, enhancing waterproofing protection with full system compatibility	Parking decks Concrete ramps Athletic surfaces
Vulkem® 350NF/ Epoxy WC/346	A three-coat polyurethane traffic deck coating system designed for waterproofing concrete slabs and protecting occupied areas underneath from water damage. Featuring an epoxy wear coat provides enhanced durability vs. a urethane only system.	Two-part epoxy wear coat provides enhanced durability vs. urethane only systems Extended service life and warranties compared to urethane only systems Resistant to chemicals, salts, mildew, fungus, and other environmental contaminants Superior aggregate retention Low VOC's and low odor are ideal for use in neighbor-friendly, inhabited structures	High-wear turning and drive lanes Helical ramps Stadium/plaza decks Parking decks Ticket spitter
Vulkem® 360NF/950N- F/951NF	A modified polyurethane three-coat traffic deck coating system designed for waterproofing concrete slabs and protecting occupied areas underneath from water damage. It is also mildew and fungus resistant and provides excellent durability and UV resistance.	Low VOC's and low odor are ideal for use in neighbor-friendly, inhabited structures Mildew-and-fungus-resistance safeguards against environmental contaminants. Excellent durability and UV resistance extends the life of vehicular systems Recoatable and compatible with other Tremco sealant and expansion joints, enhancing waterproofing protection with full system compatibility	Parking decks Concrete ramps
Vulkem® EWS Vehicular	A waterproof traffic deck coating system that utilizes polyurethane-methacrylate (PUMA) technology, which is designed to protect concrete slabs and occupied areas underneath from water damage. PUMA technology delivers extreme durability while maintaining its crack-bridging characteristics. Designed to have tenacious adhesion and extreme abrasion resistance, it allows for quick curing and can be driven on one hour after application. This system will protect the concrete from the damaging effects of chloride, deicing salts, chemicals, gasoline, oils, and anti-freeze.	Minimal downtime between application coats, even in cold temperatures Open to vehicular traffic within one hour after application, providing quick return to service Polyurethane-methacrylate (PUMA) technology delivers extreme durability, decorative functionality, and crack bridging capabilities Can be applied in temperatures as low as 14° F (-10° C) ,extending the season for applications	Parking decks Ticket spitters High-wear turning and drive lanes Hetical ramps
Heavy Duty System			
Vulkem® EWS Heavy Duty	A heavy-duty waterproof traffic deck coating system that utilizes polyurethane- methacrylate (PUMA) technology that is designed to have tenacious adhesion and extreme abrasion resistance, it allows for quick curing and can be walked in one hour after application. Ideal for waterproofing concrete slabs and protecting areas underneath from water damage and the damaging effects of water, deicing salts, chemicals, gasoline, oils, and anti-freeze.	Ninimal downtime (approximately 30 to 45 min) between application coats, ideal for condensed construction cycles, even in cold temperatures Open to vehicular traffic within one hour after application, providing quick return to service PUMA technology delivers extreme durability, decorative functionality, and crack bridging capabilities Can be applied in temperatures as low as 14° F (-10° C), extending the season for applications	Parking structures requiring snowplow resistance Loading docks Dumpster areas

NF = Neighbor-Friendly SL = Self-Leveling R = Roller

A full line of coating systems for vehicular and pedestrian deck applications as well as coatings for specialty applications, including low-VOC, low-odor formulations ideal for occupied areas.

	Description	Advantages		Best For / Systems
Specialty Coatings				
TREMfloor™ UC SL	A pigmented seamless self-leveling urethane cement flooring system with a smooth matte finish.	Contains Polygiene® Anitmicrobial Broadcast System Chemical Resistance .	Fast Return to Service-Cures in under 24 hours Breathable/Napor Tolerant Thermal Resistance up to 180°F	Without broadcast: Ideal for dry manufacturing areas. With broadcast and topcoat: Ideal for wet areas like beverage processing or restrooms.
Vulkem® OC810	Single component, high solids polyurethane membrane topcoat designed to be applied in one coat as a waterproofing system. Mildew and fungus resistance safeguards concrete surfaces against environmental contaminants. Ideal for light pedestrian traffic areas.	One coat application reduces installation time and saves on labor Low VOC's and low odor are ideal for use in inhabited structures Mildew and fungus resistance safeguards concrete surfaces against environmental contaminants Excellent durability and UV resistance extends the useful life of pedestrian systems		Balconies Pedestrian decks Mechanical rooms
Vulkem® 801	Vulkem 801 is a heavy duty aluminized polyurethane coating that can be formulated to have high tensile and tear strengths and elongation, all in a viscosity grade that can be used horizontally and vertically. This coating forms a tough, weather resistant, waterproof, elastomeric coating for waterproofing applications that require a weather-resistant coating.	One product can be applied to any application with viscosity Resistance to ponded water Able to repair built-up decks where a temporary fix is required		Cooling tanks for ponded water Gutter and rainwater applications Exposed parapets to connect inverted roof requiring waterproofing

ENGINEERED FRAMING

High-strength borate-treated Laminated Strand Lumber (LSL) with high elasticity, offering protection against moisture, insects, mold and mildew. Prebuck engineered framing will not cup, twist or warp over time and can be cut to custom design specifications.

	Description	Advantages		Best For / Systems	
Engineered Fran	ning				
Window & Door Buck	Window and Door Buck offers the contractor, owner and design community an engineered solution for punched openings. Produced with 1-1/2" (38 mm) thick, treated Laminated Strand Lumber (LSL), the Prebuck Window and Door Buck assures that the rough frame of the opening provides stable support for glazing and finish components. Made with materials that allow direct contact with concrete, a cast in place version integrates a dual keyway design to assure a secure interface from concrete to finishes.	High strength LSL material High modulus of elasticity Borate treatment offering protection against moisture, insects, mold and mildew Healthy and sustainable solution	Custom manufactured to width Non-corrosive to metals Will not cup, twist, warp or curl No chemical off-gassing Solid anchoring surface Green Building Certified	Insulated Concrete Form (ICF) walls Iilt-wall Precast concrete walls Structural steel buildings Light gauge metal stud walls Panelized wall systems	
Sill Plate	Sill Plate offers the contractor, owner and design community an engineered solution for terminating the top of a concrete wall. Produced with 1-½" [38 mm] thick, treated Laminated Strand Lumber (LSL), the Prebuck Sill Plate assures that this top of wall plate provides stable support for a floor, wall, or roof attachment. Made with materials that allow direct contact with concrete and integrates a countersunk anchor opening providing secure anchor bolt attachment to concrete walls.	High strength LSL material High modulus of elasticity Borate treatment offering protection against moisture, insects, mold and mildew Healthy and sustainable solution	Custom manufactured to width Non-corrosive to metals Will not cup, twist, warp or curl No chemical off-gassing Solid anchoring surface Green Building Certified	Tilt-wall Precast concrete walls Masonry block walls Insulated Concrete Form (ICF) walls	
Parapet Cap	Parapet Cap Framing offers the contractor, owner and design community an engineered solution for terminating parapet wall assemblies of their structure. This parapet "nailer" will interface with framing, air barriers, roofing, and finish materials (especially metal coping). Prebuck is produced with 1-½" (38 mm) thick, treated Laminated Strand Lumber (LSL) to assure that the parapet cap provides stable support for your coping and flashing components. Prebuck is customized to design and is effective in reducing labor and staging costs.	High strength LSL material High modulus of elasticity Borate treatment offering protection against moisture, insects, mold and mildew Healthy and sustainable solution	Non-corrosive to metals Will not cup, twist, warp or curl No chemical off-gassing Solid anchoring surface Custom manufactured to width Green Building Certified	Tilt-wall Precast concrete walls Masonry block walls Insulated Concrete Form (ICF) walls	Structural steel building: Light gauge metal stud walls Panelized wall systems Wood framed walls
				333	

INSULATED CONCRETE FORMS

A full line of innovative products delivering an affordable, eco-friendly building solution that provides faster building speeds, superior energy efficiency, disaster resilience, and sound and fire-resistance.

	Description	Advantages		Best For / Sys	stems	
ICF Series						
Assembled Forms	Full line of assembled ICF forms manufactured with industry leading technologies, including DURALOK Technology®, DURAFOLD Technology®, DURAMAX Technology®, and the 4-Way Reversible system. Forms include Standard form, 90° form, 45° form, Taper Top form, Brick Ledge form, & Custom Cut Radius form.	Fully Assembled Standard Form Sizes from (102 mm - 305 mm) Industry leading technologies Fully-Assembled to eliminate on-site asser		Below Grade Foundations Above Grade Walls Multi-Story Buildings Crawl Space Walls Retaining Walls	 Pools Retail Apartments and Condos Hospitality Institutional 	Building of Worship Industrial Agricultural Educational Grade Beams
Unassembled Forms	Full line of unassembled ICF panels to allow for the assembly of numerous form combinations to suit any unique jobsite requirements. These unassembled panels include Standard panel, Taper Top panel, Brick Ledge panel, and the Optimizer form panels.	Assembly of wide width walls to suit uniquing requirements Industry leading technologies	e building	Unique building applicat	ions and requirements	
ICF Accessories	Wide range of accessory products for a variety of ICF applications. Accessories include ICF floor hanger systems, T-Form Support brackets, Vertical Joint Clips, variety of tapes, Low Expansion Spray Foam, and much more to complement the installation of the ICF forms.	Accessory products to support the installat forms	tion of the ICF	Used to complement the construction	e ICF Series form during	assembly and wal
Alignment System	A multi-purpose set of components that ensures, during the ICF construction process, the ICF forming system is properly supported during concrete placement while also providing a safe working platform for the installer.	Variety of options to suit any wall height Different system options to suit user prefer	rence	Used to support the ICF Provides a walk platforn		
One Series						
One Series Form	Industry's first multi-link form offering the ability to reduce labor by eliminating the need to strip the EPS foam for elevator shafts, stairwells, and other areas that required a non-combustible finish.		sign Versatility dustry leading technologies	Elevator Shafts Stairwells		
One Series Accessories	Collection of accessory products to assist in the assembly and construction of the One Series Wall. Accessories include a metal jig, conner connector, formply inserts, and many more.	Accessory products to support the installat forms	tion of One Series	Used to complement the construction	e One Series form during	assembly and wa
Plus Series						
XR35	The XR35 form is manufactured with 4" (100 mm) thick EPS foam on both side of the fully assembled form, providing a significant increase in insulation performance.	• 4" (102 mm) thick EPS Foam Panel • Available in 6" (152 mm) and 8" (203 mm) • Industry-leading technologies	Concrete Core	Below Grade Foundations Above Grade Walls Multi-Story Buildings Crawl Space Walls Retaining Walls Pools Apartments and Condos Retail Hospitality Industrial Building of Worship Industrial Agricultural Educational Grade Beams		
Plus Series Form	Plus Series forms address the industry demand for increased exterior insulation options by providing thickened EPS panels on one side of Nudura assembled ICF forms. The additional foam thicknesses range from 1" - 6" [25 mm - 152 mm]	Standard form sizes from 4" - 12" (102 mm Additional insulation thickness options from (25 mm - 152 mm) Industry-leading technologies				
R-Value Inserts	Engineered to integrate into any Nudura Form unit, allowing for increases R-values, while not interfering with the industry leading technologies of the Nudura ICF forms. R-Value Inserts are available in standard thicknesses ranging from 1" - 6" (25 mm - 152 mm) and are easily slid into the dovetails on the interior face of the Nudura ICF form.	Additional insulation thickness options froi (25 mm - 152 mm) Do not interfere with Nudura Industry leadi				
Integrated Series						
HYDROFOAM®	Radiant floor insulation for residential and commercial construction applications that increases the comfort and energy efficiency. HYDROFOAM is a 4 ° x 4 ° (1.2 m x 1.2 m) individually molded board that maximizes radiant floor heating by ensuring the heat is dispersed evenly throughout the entire floor area, providing building occupants with a comfortable living and working environment. HYDROFOAM offers installers a lightweight high density Expanded Polystyrene (EPS) that increases installation speeds, and is easy to cut to meet any angle or radius required.	Multi-directional anchor system eliminates the need to tie the PEX tubing Radiant heat pipe is easily stepped into place in any	ailable in various thicknesses 0% recyclable I CFCs or HCFCs organic and rot-proof material sistant to water and moisture erlapping interlock on all ur sides	Residential applications Basement Slab Slab on grade Garage slab (light-weight)	U *	
HOMEGA™	HOMEGA is a 4" x 8" (1219 mm x 2438 mm) individually molded insulation panel with three integrated furring strips at 16" (406 mm) on center and shiplapped on all four sides. It is a unique, patented, 2-in-1 system offering superior performance. HOMEGA can be used to insulate foundation walls and floors, interior and exterior walls and ceilings.	Overlapping interlock on all	0% recyclable I CFCs or HCFCs organic and rot-proof material sistant to water and moisture	Concrete Foundation wa Interior or Exterior of blo Residential Ceiling insul	ock walls	

Willseal's industry-leading pre-compressed, silicone-impregnated foam expansion joint systems provide a strong bond to surrounding substrates, while providing superior durability and excellent movement capabilities.

	Description	Advantages	Best For / Systems
Pre-Compressed Foa			
Willseal® 250	A pre-compressed, self-expanding open micro-cell polyurethane foam impregnated with a hydrophobic, acrylic polymer sealing compound coated with a factory-applied silicone sealant. It is designed to provide a watertight, dust-proof, airtight, noise-reducing, thermally insulating, and UV stable primary seal.	Allows for up to 100% (±50%) movement Accommodates rapid rates of movement Utilizes non-invasive anchoring Monolithic construction – no unbonded laminations	Primary Horizontal Expansion Joints for Vehicular/Pedestrian: • Parking Garages • Stadiums • Plaza Decks on grade • Bridges • Airport Runways & Taxiways
Willseal® 250R	A patent-protected expansion joint system which combines the performance and reliability of Willseal 250 with reinforcing members beneath the sealant face to support higher point loads. Consists of 3 construction elements: 1. Impregnated Foam Core: pre-compressed, open micro-cell polyurethane foam 2. Sealant Face: a factory applied coating of traffic-rated silicone 3. Reinforcing Members: factory integrated reinforcements beneath sealant face	Allows for up to 100% (±50%) movement Maximum seal in structures with shear and rapid movement Reinforced members provide stability across the joint under traffic Surface load transfer Excellent compression recovery Utilizes non-invasive anchoring	Primary Horizontal Expansion Joints for Vehicular/Pedestrian: Parking Garages Stadiums Plaza Decks Roll Entrances Concourses Pedestrian and vehicular bridges
Willseal® 600	A pre-compressed, self-expanding foam joint seal, engineered to perform as a highly flexible, weather-tight, <u>primary seal</u> in vertical exterior applications. The high-density polyurethane foam is impregnated with a modified flame retardant, hydrophobic, UV stable acrylic resin and treated with a pressure-sensitive adhesive on one side for ease of installation.	Remains permanently flexible No mixing, masking, or priming required Easy soap-and-water cleanup: no solvents, no cartridges, no pails Compatible with most porous or sensitive substrates Depth of seal can be changed to increase R-value and sound properties	Primary expansion, control, isolation & retrofit joints Joints in pre-cast concrete, masonry, brick and facades Roofing and insulated metal panels Exterior insulation finish systems (EIFS) Primary seal in starter track assemblies for window wall
Willseal® 600S	A pre-compressed, self-expanding foam joint seal, engineered to perform as a highly flexible, secondary seal in vertical applications. Specifically designed to provide the ideal foundation for a large variety of wet sealants, such as silicone, polyurethane, polysulfide, and acrylic. Unlike conventional wet sealant and backer rod methods, Willseal 600S is not susceptible to breakdowns caused by excessive or rapid joint movements, thus protecting structures against rain, wind, dust, and sound.	Remains permanently flexible Seals gaps or seams as small as 1/8" Vapor permeable Impregnated with a modified flame retardant Can be applied in various weather and temperature conditions Says soap-and-water cleanup: no solvents, no cartridges, no pails Depth of seal can be changed to increase R-value and sound properties	Secondary expansion, control, isolation & retrofit joints Secondary construction joints behind a wet seal Joints in pre-cast concrete, masonry, brick and facades Roofing and insulated metal panels Exterior insulation finish systems (EIFS) Window and flashing applications
Willseal® FR-V	A fire-rated, watertight, UV stable foam, sound-attenuating expansion joint with a pre-cured, factory-applied sealant applied to the face. Comprised of a fire-retardant impregnated foam designed to be used in vertical expansion joints by itself, but it can also be used behind any other expansion joint cover, plate or filler where joint depth allows.	Allows for up to 100% (±50%) movement Accommodates rapid rates of joint movement 2 & 3 hour fire rated seal when installed with a tested firestop system Prevents toxic gases and fumes from passing thru the joint	Vertical fire-rated expansion joint systems Primary construction joints Expansion, control, and isolation joints Retrofit & seismic joints
Willseal® FR SAF-V	A fire-rated, watertight, UV stable foam, sound-attenuating expansion joint with a pre-cured, factory-applied pick-resistant sealant applied to the face. Comprised of a fire-retardant impregnated foam designed to be used in vertical expansion joints by itself, without the addition of an intumescent sealant on the foam surface.	Allows for up to 100% (±50%) 2- & 3-hour fire rated seal when installed with a tested firestop system Prevents toxic gases and fumes from passing thru the joint Sealant hardens to 50 ± 10 durometer Meets UL94V0, Cal 117 for self-extinguishing	Vertical fire-rated pick-resistant expansion joints found in schools, detention facilities, hospitals, prisons, and other government facilities
Willseal® FR-H	A fire-rated, watertight, UV stable foam, sound-attenuating expansion joint with a pre-cured, traffic-rated factory-applied sealant applied to the face. Comprised of a fire-retardant impregnated foam designed to be used in horizontal expansion joints by itself, but it can also be used behind any other expansion joint cover, plate or filler where joint depth allows.	Coated with traffic-grade sealant Allows for up to 100% (±50%) movement 2 - & 3 - hour fire rated seal when installed in accordance with a UL tested firestop system Prevents toxic gases and fumes from passing through the joint	Horizontal fire-rated joints for vehicular/pedestrian traffic: • Parking Garages • Plaza Decks on Grade • Airport runways Horizontal fire-rated joints for vehicular/pedestrian traffic: • Stadiums • Ceiling applications
Willseal® Seismic	A pre-compressed, self-expanding, open micro-cell polyurethane foam impregnated with a hydrophobic, acrylic polymer and coated with a factory-applied silicone sealant. It is designed to provide a watertight, dust-proof, noise-reducing, thermally insulating, and UV stable primary seal that does not require invasive anchoring for installation.	Allows for up to 100% (±50%) movement One-step primary sealant for areas where color matching is important Puncture-resistant, elastomeric coating on exterior surface, can be factory colored to match most construction substrates or sealants	Vertical Expansion Joints: • Retrofit & Seismic joints • Precast, masonry, brick • Exterior insulation finish systems (EIFS) • Exterior panel systems (masonry, granite, metal, curtainwalls)
Willseal® Seismic HS	A pre-compressed, self-expanding open micro-cell polyurethane foam impregnated with a hydrophobic, acrylic polymer and coated with a factory-applied silicone sealant. Designed to provide a watertight, dust-proof, noise-reducing, thermally insulating, and UV stable primary seal.	Allows for up to 100% (±50%) movement Puncture-resistant, elastomeric coating on exterior surface, can be factory colored to match most construction substrates or sealants Used in joints up to 4" (10.16cm) wide	Primary joint in non-trafficked horizontal applications: Primary construction joints Retrofit and seismic joints Exterior panel systems (masonry, granite, metal, curtainwalls)
Willseal® Seismic SAF V	A pre-compressed, self-expanding open microcell polyurethane foam impregnated with a hydrophobic, acrylic polymer and coated with a factory-applied pick resistant sealant. It is designed to provide a watertight, dust-proof, noise-reducing, thermally insulating, and UV stable primary seal for areas that can be easily damaged or vandalized in institutional or other public buildings.	Altows for up to 100% (±50%) movement Tamper-resistant Sealant hardens to 50 ± 10 Shore A durometer Meets UL94V0, Cat 117 for self-extinguishing	Used as a primary seal in areas that require a tamper-resistant seal found in schools, detention facilities, day cares, hospitals, prisons, and other government facilities.
Closed-Cell Foam J	oints		
Willseal® Coreseal	A lightweight, preformed closed-cell ethylene vinyl acetate (EVA) copolymer foam. It is designed to provide a watertight, dustproof, airtight, noise-reducing, thermally insulating and UV stable primary seal that does not require invasive anchoring for installation.	Allows for up to 50% (±25%) movement Impermeable to water, provides a watertight seal Monolithic construction for standard sizes – will not delaminate UV and Chemical resistant	Below grade applications Stadiums Plaza Decks Bridge expansion joints Highway longitudinal and transverse joints
Willseal® Color Coreseal V	A lightweight, preformed closed-cell ethylene vinyl acetate (EVA) copolymer foam with a pre-cured, factory-applied sealant. It is designed to provide a watertight, dust-proof, airtight, noise-reducing, thermally insulating and UV stable primary seal that does not require invasive anchoring for installation.	Allows for up to 50% (±25%) movement Does not rely on the silicone coating or field applied bead to provide seal Used for joints up to 10" wide Colored sealant skin for chemical and puncture resistance	Vertical expansion, control and isolation joints Retrofit & seismic joints Pre-cast concrete walls, tilt-up walls Exterior panel systems - Masonry, Granite, Metal, EIFS, Curtain Walls Larger joints requiring an architectural finish
Willseal® Color Coreseal H	A lightweight, preformed closed-cell ethylene vinyl acetate (EVA) copolymer foam with a pre-cured, traffic-rated factory-applied sealant. It is designed to provide a watertight, dust-proof, airtight, noise-reducing, thermally insulating and UV stable primary seal that does not require invasive anchoring for installation.	Allows for up to 50% (±25%) movement Impermeable to water, provides a watertight seal Does not rely on the silicone coating or field applied bead to provide seal Used for joints up to 4" wide Colored sealant skin for chemical and puncture resistance	Horizontal Expansion Joints: • Below grade applications • Seismic, large & retrofit joints • Highway longitudinal and transverse joints • Bridge & parking expansion joints • Larger joints requiring an architectural finish
Willseal® Color Coreseal SAF V	A lightweight, preformed closed-cell ethylene vinyl acetate (EVA) copolymer foam with a pre-cured, factory-applied pick-resistant sealant. It is designed to provide a watertight, dust-proof, airtight, noise-reducing, thermally insulating and UV stable primary seal for areas that can be easily damaged or vandalized in institutional or other public buildings.	Allows for up to 50% (±25%) movement Impermeable to water, provides a watertight pick resistant seal. Does not rely on the sealant coating or field applied bead to provide seal Used for joints up to 10" wide	Vertical expansion joints Retrofit & seismic joints Retrofit & seismic joints Expansion, control and isolation joints Expansion, control and isolation joints Exterior panel systems - Masonry, Granite, Metal, Curtain Walls

High-performance urethane, silicone and specialty sealants designed to seal the entire building enclosure while meeting the demanding requirements and special needs of architects, engineers, contractors and building owners.

Single-Component Ure Dymonic® 100 Vulkem® 116 ⁽¹⁾	Description athane Sealants A durable, flexible polyurethane sealant that offers excellent performance in moving joints and exhibits tenacious adhesion once fully cured. Formulated with an innovative polymer technology, Dymonic 100 is paintable, highly versatile, has a unique capability to adhere to damp or green concrete and will not out gas. An excellent general-purpose, durable, gun-grade polyurethane sealant for exterior use. Vulkem 116 has a 30-year history of superior primerless adhesion to porous substrates, making it the optimal choice for sealing expansion joints in commercial construction.	Significantly reduces dirt attraction with a skin time of 2 hr and tack-free time of 6-8 hr Movement capability of +100/-50% Low VOC Non-sag, single-component polyurethane sealant Rated for ± 25% movement capability Suitable for certain water immersion applications	UV stable, will not crack, craze, or yellow Suitable for water immersion and will not out-gas Can adhere to damp or green concrete Can be painted to achieve desired appearance	Expansion and control joints Precast concrete panel joints Perimeter caulking
Vulkem® 116 ⁽¹⁾	in moving joints and exhibits tenacious adhesion once fully cured. Formulated with an innovative polymer technology, Dymonic 100 is paintable, highly versatile, has a unique capability to adhere to damp or green concrete and will not out gas. An excellent general-purpose, durable, gun-grade polyurethane sealant for exterior use. Vulkem 116 has a 30-year history of superior primerless adhesion to porous substrates, making it the optimal	time of 2 hr and tack-free time of 6-8 hr • Movement capability of +100/-50% • Low VOC • Non-sag, single-component polyurethane sealant • Rated for ± 25% movement capability	 Suitable for water immersion and will not out-gas Can adhere to damp or green concrete Can be painted to achieve desired appearance 	Precast concrete panel joints Perimeter caulking
	sealant for exterior use. Vulkem 116 has a 30-year history of superior primerless adhesion to porous substrates, making it the optimal		Jet fuel-resistant	Aluminum, masonry, and vinyl siding Fluid applied flashing in rough opening perimeters
Vulkem® 45SSL (2)		Textured, single-component, moisture-curing polyuret dynamic joints	thane sealant that offers excellent performance	Poured and precast concrete joints Window and door perimeters Masonry, metals, vinyl, plastics, wood Certain immersion applications
	A highly versatile, semi-self-leveling, low-modulus, polyurethane sealant with exceptional primerless adhesion and movement capability. Formulated for use in horizontal expansion joints with the unique ability to adhere to damp or green concrete.	Traffic rated, moisture-curing polyurethane sealant Suitable for continuous immersion Provides exceptional wear and tear resistance required in high traffic areas Jet fuel-resistant	Can adhere to damp or green concrete Great UV resistance and will not out gas Pourable, semi-self-leveling polyurethane sealant	Expansion joints in sidewalks, swimming pool decks, plazas, floors Horizontal surfaces with slopes up to 6% (e.g. 1' rise for every 16' run)
Hybrid Sealants				
	A durable, flexible hybrid sealant that offers excellent performance and exhibits tenacious adhesion in moving joints. Formulated with proprietary silane end-capped polymer technology, Dymonic FC is fast-curing to reduce dirt attraction, while maintaining excellent movement capability.	Exceptional movement capability of ± 35% Will not green crack due to early movement Low modulus formula withstands joint movement Adheres to a variety of substrates for versatile use	Cures fast to save time and reduce dirt attraction, skin time of 60 min and tack-free time of 3-4 hr Can be painted to achieve desired appearance (check paint compatibility)	Expansion and control joints Precast concrete panel joints Perimeter caulking (windows, door, panels) Aluminum, masonry, and vinyl siding
Multi-Component Uret	thane Sealants			
	A field-tintable, semi-self-leveling, polyurethane sealant that includes a tintable base and a choice of 70 standard colors. Offers exceptional primerless adhesion and movement capability in horizontal applications.	Traffic rated, multi-component, moisture-curing polyurethane sealant Suitable for continuous immersion in non-chlorinated water	 Pourable and semi-self-leveling Jet fuel-resistant Can be applied to damp or green concrete Great UV resistance and will not out gas 	Expansion joints in sidewalks, swimming pool decks, plazas, floors Horizontal surfaces with slopes up to 6% (e.g. 1' rise for every 16' run)
Silicone Sealants*				
	The ideal sealant for the most demanding dynamically moving joints. Spectrem 1 is a high-performance, ultra-low modulus silicone sealant, formulated to work with materials having a high coefficient of linear expansion.	High elasticity with movement ability of +100/-50% Moisture-curing, single-component silicone sealant requires no mixing and is always ready for immediate application with conventional cauking equipment Greenguard Gold certification ensures safety for use in the most sensitive indoor environments	Excellent for difficult-to-adhere-to substrates Wide variety of colors to choose from with custom colors and color matching available Resistance to driving rain, ozone, UV light, and temperature extremes provides exceptional weatherability in all climates	Sealing dynamically moving joints in • EIFS • Aluminum/metal panels • Curtain walls • Window perimeters • Pre-cast concrete • Post ExoAir membrane detailing • Adhering Proglaze ETA • Bonding to the HDPE facer of self-adhered membranes
· ·	A high-performance, medium-modulus silicone sealant, ideal as a single product for a variety of applications on the same job from 2-sided structural glazing to perimeter caulking and joint filling.	Offers excellent adhesion to a variety of substrates in Resists driving rain, ozone, UV light, and temperature Wide variety of colors to choose from with custom col Greenguard Gold certification ensures safety for use in	extremes for weatherability in all climates lors and color matching available	Structural glazing (tensile and weather beads) Window perimeter caulking General glazing: toe beads, heel beads, cap beads Suitable for use on aluminum, glass, steel, painted metal, plastic, stone, concrete and brick
	An easy to use, construction grade sealant with patented advanced silicone technology. Spectrem 3 is non-staining and low polar, which leads to reduced attraction to dirt and an improved aesthetic appearance.	Low polar attraction to dirt, limiting accumulation and making buildings easier to clean and maintain Matte finish, creates an aesthetically pleasing appearance with EIFS and stone substrates Primerless adhesion to most porous substrates	Extended tooling time and workability in high temperatures Low-VDC and zero-solvent content Greenguard Gold certification ensures safety for use in the most sensitive indoor environments	Porous stone, masonry EIFS Aluminum, metal panels Pore-cast concrete joints
	A tintable, multi-component, construction grade sealant with patented advanced silicone technology. Spectrem 4-TS offers advanced color flexibility with the opportunity to tint the material on site, and is non-staining and low polar, which leads to reduced dirt attraction and an improved aesthetic appearance.	Dynamic movement capability of ± 50% Tremco Universal Color Paks available in 70 standard colors with no minimum purchase quantity creates color flexibility for seamless façade appearances Tintable on-site for quick turn-around	Low polar attraction to dirt makes buildings easier to clean and maintain Primertless adhesion to most materials Low-VOC and zero-solvent content Greenguard Gold certification ensures safety for use in the most sensitive indoor environments	Sealing dynamically moving joints in: • EIFS • Expansion and control joints • Tilt-up panel joints • Perimeter caulking (windows, doors, panels) • Pre-cast concrete panel joints
800/900SL	Both are Spectrem 800 and 900SL are low-modulus, parking structure and highway joint sealants capable of withstanding dynamic movement in the most demanding joints found in heavily trafficked areas. Spectrem 900SL has the added feature of being self-leveling.	Moisture-curing, single-component silicone sealants immediate application with conventional caulking equ Low modulus and high movement characteristics mak demanding dynamically moving joints typical of highw. Spectrem 900SL is self-leveling for easy installation or	ipment or highway sealing equipment to these products suitable for sealing the most ay and bridge construction	Sealing traffic joints where high movement occurs: • Highways • Airport runways and joints • Parking decks, garages, and other parking structures • Bridge joints
	A single-component, acetoxy silicone sealant that cures to a flexible rubber when exposed to moisture present in the air, providing a weathertight seal in various applications.	Produces a weathertight seal White and Clear options available with a fungicide Easy to apply with standard caulking equipment	Greenguard Gold certification ensures safety for use in the most sensitive indoor environments, including hospitals and schools	Ideal for use in kitchens, bathrooms, spas, and similar applications Suitable on glass, metal, porcelain, ceramic, and most painted surfaces, creating a weathertight seal
	A fast skinning backbedding silicone sealant that cures to a flexible rubber when exposed to moisture in the air. Excellent adhesion to a variety of surfaces, making it ideal for multiple applications on the same job. Designed for application through automated glazing equipment (x-y tables)	Excellent adhesion to a variety of substrates, includin Neutral-curing, single-component silicone sealants the immediate application with conventional caulking equ Greenguard Gold certification ensures safety for use in	hat require no mixing and is always ready to use for ipment or highway sealing equipment	Ideal for use as an in-plant glazing sealant for applications that include back-bedding, cap, heel and toe beads, and sash joinery Has excellent adhesion to aluminum, stainless steel, metals, glass, plastics, rigid PVCs, wood, brick, concrete and painted surfaces

High-performance urethane, silicone and specialty sealants designed to seal the entire building enclosure while meeting the demanding requirements and special needs of architects, engineers, contractors and building owners.

	Description	Advantages		Best For / Systems	
Specialty Sealants					
Tremflex® 834	A general purpose, pure acrylic latex sealant formulated to provide a fast setting pliable seal with minimal shrinkage. Formulated from the highest quality acrylic polymers to offer exceptional flexibility and workability for any commercial construction acrylic sealant applications. Designed for application through automated glazing equipment (x-y tables)	Tack-free in 15 min and ready to paint in 30-45 min with latex or oil-based paint Easy gunning Non-staining	Can be used indoors or outdoors Reduces sound transmissions when constructing partition walls	Ideal as an in-plant glazing sealant for back-bedding, cap, heel and toe beads, and sash joinen Excellent adhesion to aluminum, stainless steel, metals, glass, plastics, rigid PVCs, wood, brick concrete and painted surfaces	
Tremco® 830**	A one-part, thermoplastic elastomeric sealant that provides a high performance, flexible seal in glazing and siding applications.	Offered in a wide range of colors to match popular siding and window tints Fast skinning, fast cure through	Easy gunning Excellent weather and UV resistance Can be painted with latex paint	Glazing: used for face bedding, cap beads and s Siding: used with sill trim, flashings, fascia, J-I Suitable for sealing the perimeters of wood, PVI	trim, F-channel, and crown molding
Acoustical / Curtainwall Sealant	A non-skinning, non-hardening synthetic rubber sealant developed for acoustical sealing of drywall partitions, curtainwalls, corridors, and party walls.	Application greatly increases the Sound Transmission Class (STC value) of a system Single component sealant, requires no mixing	Reduces the decibel level when one or more beads are applied to a joint May be used in contact with polystyrene	Acoustical Sealing of Joints: • Drywall partitions & corridors • Bedding for panels, sheets, rails, moldings and other types of sleeves or connections to aluminum window wall and curtain walls	Suitable for lap joint and perimeter sealant for polyethylene vapor barriers over fiberglass batt or other insulations Concealed lap joints & perimeter sealant Concealed metal-to-metal curtain wall joints
Adhesives					
TREMGrip®	A quick tack adhesive that acts as a second set of hands you can count on! TREMGrip is a high performance adhesive developed to bond construction materials to a variety of substrates. A one component, non-sag, elastic, quick tack adhesive based on hybrid polymers.	Extremely high initial grab Instant grab minimizes the need for additional fasteners or clamps during installation Offers great elasticity and rapid bond development	Suitable for use on a variety substrates both indoors and outdoors Resistant to UV, weather, and aging Extremely low VOC, low odor	Drainage board for backfill applications Air Barrier Applications Insulation to Air Barriers and Below Grade Mem Metal-to-metal joinery Bedding compound Rubber-to-metal	branes
SSL = Semi-Self-Leve	ling TS = Tintable Silicone SL = Self-Leveling				

TRANSITIONS

Innovative, pre-engineered, airtight and watertight systems designed to provide continuity at critical transitions from window or structural framing to adjacent air and vapor barrier systems.

	Description	Advantages	Best For / Systems
Engineered Trans	ition Assembly		
Proglaze® ETA	Proglaze ETA Connections are pre-engineered silicone materials used as a transition assembly between the window or wall system and adjacent air and vapor barrier materials. Designed to absorb thermal movement and windloading stresses. Comprised of a flat single- or double-ribbed silicone extrusion, which is adhered with Spectrem 1 Silicone Sealant to ensure a durable connection and positive seal. The opposite edge of the ribbed silicone extrusion will span unsupported onto the wall and/or window system, which is adhered with Spectrem 1 as well.	Thin cross-section and low durometer allows the material to span and seal across irregular window geometries The translucent silicone material allows the installer and/or inspector to see through the gasket to verify the recommended amount of sealant is properly applied to ensure an effective seal is achieved, while the ribs of the gasket's design ensures a minimum sealant thickness Wide variety of widths (either Single Ribbed or Double Ribbed) available to support any project, with custom sizing as an additional option	Expansion Joints Seismic Joints Recommended for use in conjunction with the ExoAir membranes Fully compatible with most window sealants and glazing materials *Not recommended as a seal to untested substrates
Polyurethane Foa	ms		
ExoAir® Flex	Single-component, moisture-cure, gun-grade polyurethane flexible foam that performs as a thermal barrier with an industry leading movement range of +/-15%	Single-component polyurethane foam with a (H)CFC-free propellant. High yield versus existing polyurethane foams Uuick tack-free time Excellent properties at low ambient temperatures	Best suited as a thermal and sound barrier to be used in the perimeters around windows and doors. Flexible composition is well-suited for applications that incur movement.
ExoAir® LEF	ExoAir® LEF is a single-component, CFC-free, all-season, high performance, gun-grade polyurethane foam that performs as a thermal barrier.	The ExoAir LEF is best suited around window and door frame joints but can also be used as an effective joint filler in hidden applications. LEF is most commonly used as a thermal and sound barrier. The product can be installed in temperatures ranging from 14 to 95° F (-10 to 35° C)	Used to fill gaps surrounding penetrations prior to air barrier installation. Best suited around window and door frame joints but can also be used as an effective joint filler.
Pre-Formed Trans	ition Extrusions		
Spectrem® Simple Seal	A high performance preformed silicone extrusion specifically designed to have high elongation properties. Spectrem Simple Seal is typically bonded with Spectrem 1 or Spectrem 2 Silicone Sealant to a wide range of substrates to provide a watertight seal in new construction or restoration projects.	Cost effective alternative to cutting out existing failed sealant High flexibility and movement capability for sealing high movement joints Casy to install ultra-low modulus silicone extrusion, saves time and labor Wide operational temperature range Non-corrosive and corrosion resistant SWRI Validated	Tremco Spectrem Simple Seal is designed for both new construction and restoration work involving window perimeter, EIFS joints, parapet walls, skylights, aluminum window seals, transition seals, curtain walls joints, sheet metal roofs, & other joints.

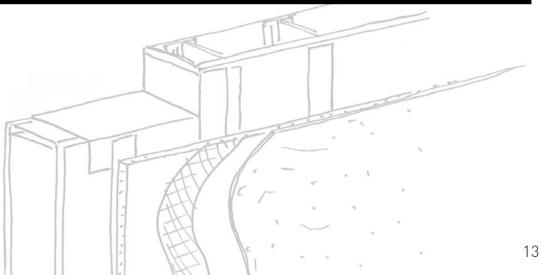

AIR BARRIERS

Together, Dryvit and Tremco offer fluid-appled, self-adhered, and pre-applied air and vapor barriers to fit any project's performance criteria.

	Description	Product Advantages	Best For / Systems	
Fluid-Applied Air E	darriers			
ExoAir® 120	The fluid-applied asphaltic vapor barrier membrane recommended for use in commercial applications.	Monolithic application	Exterior grade gypsum Fiber-reinforced cement Unpainted, unsealed concrete	• E xterior grade plywood • OSB • Metal
ExoAir® 130	The high performance fluid-applied vapor barrier membrane that offers 12 months of UV resistance and service temperatures up to 240 °F. Recommended for use in commercial applications and projects that require NFPA 285 assembly testing.	Monolithic application Extended UV resistance High service temperatures	Exterior grade gypsum Fiber-reinforced cement Unpainted, unsealed concrete	• Exterior grade plywood • OSB • Metal
ExoAir® 220	The fluid-applied asphaltic vapor permeable air barrier membrane recommended for use in commercial applications.	Monolithic application	Exterior grade gypsum Fiber-reinforced cement Unpainted, unsealed concrete	• Exterior grade plywood • OSB • Metal
ExoAir® 230	A high performance fluid-applied vapor permebale air barrier membrane that offers 12 months of UV resistance and service temperatures up to 240 °F. Recommended for use in commercial applications and projects that require NFPA 285 assembly testing.	Monolithic application Extended UV resistance High service temperatures Primerless application on most substrates	Exterior grade gypsum Fiber-reinforced cement Unpainted, unsealed concrete Exterior grade plywood	OSB EIFS ICF Metal
ExoAir® 230LT	The low temperature formula of ExoAir 230, a high performance fluid-applied vapor permebale air barrier membrane that offers 12 months of UV resistance and service temperatures up to 240 °F. Recommended for use in commercial applications and projects that require NFPA 285 assembly testing.	Can be applied at 20 °F and rising Monolithic application Extended UV resistance High service temperatures Primerless application on most substrates	Exterior grade gypsum Fiber-reinforced cement Unpainted, unsealed concrete	Exterior grade plywoodOSBMetal
EnviroDri®	An asphaltic fluid-applied vapor permeable air barrier membrane that creates a permanent and complete weather-resistant barrier for residential and multi-family applications.	Monolithic application Can be applied at 0 °F and rising	Plywood Structural fiber board OSB	Exterior grade gypsum Block masonry Exterior grade plywood
Backstop® NTX Smooth / Texture	Created for use with Dryvit's Outsulation Systems, this fluid-applied vapor permeable air barrier membrane can be applied as low as 25 °F with a sprayer or roller in Smooth, or with a trowel in Texture.	Can be applied at 25 °F and rising Monolithic application High service temperatures	EIFS EPS Exterior grade gypsum Exterior sheathing	• Fiber-reinforced cement • Unpainted, unsealed concrete • ICF
Backstop® NT-VB	Created for use with Dryvit's Outsulation Systems, this fluid-applied vapor barrier membrane can be applied using a trowel or texture spray equipment.	Monolithic application ensures a continuous film barrier across transitions High service temperatures	EIFS EPS Exterior grade gypsum Exterior sheathing	• Fiber-reinforced cement • Unpainted, unsealed concrete •ICF
Backstop® DMS	A one step fluid-applied permeable air barrier and adhesive created for Dryvit's Outsulation Systems. Specifically formulated for spray applications.	One-step adhesive and barrier for labor savings Monolithic application Ready to use, just add water	EYS Exterior grade gypsum Exterior sheathing	Fiber-reinforced cement Brick, cement plaster, concrete masonry
Self-Adhered Air B	arriers and Flashings			
ExoAir® 110	The self-adhered asphaltic vapor barrier used in projects that require a 40-mil flashing.	Manufactured to a present,uniform thickness Available in 6", 9", and 12" flashing sizes		Fiber-reinforced cement Unpainted, unsealed concrete
ExoAir® 110AT	The high performance self-adhered vapor barrier that that offers 12 months of UV resistance and service temperatures up to 240 °F. ExoAir 110AT can be applied in hot or cold temperatures without the need for a primer. Recommended for use in commercial applications and projects that require NFPA 285 assembly testing.	Can be applied at 20F and up Extended UV resistance Primerless application on most substrates High service temperatures	Exterior grade gypsum Exterior sheathing Fiber-reinforced cement Unpainted, unsealed concrete	
ExoAir® 210AT	The high performance self-adhered vapor permeable air barrier that that offers 6 months of UV resistance and service temperatures up to 240 °F. ExoAir 210AT can be applied in hot or cold temperatures without the need for a primer. Recommended for use in commercial applications and projects that require NFPA 285 assembly testing.	Can be applied at 20 °F and rising Primerless application on most substrates Manufactured to a present, uniform thickness High service temperatures	Exterior grade gypsum Exterior sheathing Fiber-reinforced cement Unpainted, unsealed concrete	
Pre-Applied Air Ba	rrier			
Securock® ExoAir® 430	Brings two proven technologies together — USG Securock® Brand UltraLight Glass-Mat Sheathing and Tremco ExoAir® air barrier membrane — into one panel that efficiently controls air, water, and vapor throughout the building envelope. Perfect for projects that want to increase speed without sacrificing performance.	Can be applied at any temperature Manufactured to a preset, uniform thickness Extended UV resistance High service temperatures Iested to NFPA 285 assembly and ASTM E84.	Exterior-grade gypsum Specified for projects requiring extende and E84 & NFPA 285 testing Used in conjunction with other accessor air barrier system	• .

Passive fire protection products with more than 400 independently tested, fire-rated systems for through-penetrations and joints.

	Description	Advantages	Best For / Systems
TREMstop® Acrylic	A gunnable acrylic latex sealant that stops fire at joints and through- penetrations to better protect the structural integrity of the building.	Features excellent movement for flexibility after application Excellent unprimed adhesion on a wide range of substrates Accepts paint after being fully cured to allow a multitude of aesthetic designs and colors 15 [Class A] Flame Spread, O Smoke Development Single-component, gunnable formula allows for quick application	Electrical, Mechanical, Plumbing, and Telecom Applications: • Fire-rated assembly smoke partitions through assembly joints • Fire-rated assembly through penetrations • Smoke partition joints and penetrations • Suitable for static and dynamic joints • Can be used on metal/plastic/insulated pipes, cables and ducts
TREMstop® Fyre-Sil	A neutral-cure silicone sealant that provides protection against washout conditions in firestopping applications. When installed with a tested firestop system, TREMstop Fyre-Sil grants code compliance for both through-penetrations and fire-rated joints.	Available in both gun-grade and self-leveling options for jobsite flexibility Self-leveling allows for a quicker application and quicker cure to save time on a job Single-component formula allows labor and time costs savings	Electrical, Mechanical, Plumbing, and Telecom Applications: • Fire-rated and smoke-rated joints • Smoke partition joints and penetrations • Fire-rated assembly smoke partition through assembly joints • Fire-rated assembly through penetrations • Static and dynamic joints in concrete, wood floor/ceiling, and gypsum assemblies • Can be used on metal pipe, plastic pipe, cables, and cable trays
TREMstop® Smoke & Sound	An acrylic latex sealant for use in smoke-rated partitions or joints and to prevent sound transmission through unprotected openings. Allows for a safe environment to exit a building when next to a fire by reducing the amount of smoke transmission through unprotected openings.	This one product meets the needs for both smoke and sound rated partitions to save costs of using a second product Available in both gun-grade and sprayable options for jobsite flexibility Accepts paint after full cure to allow a many designs and colors Contains an anti-fungal additive for a longer sealant life	Smoke partition joints and penetrations Through penetrations Sound rated partitions
TREMstop® SuperStrip	A flexible graphite-based intumescent with a polyethylene backer designed to expand when exposed to a fire to fill any voids lefts as the combustible materials burn away. Will fill out to stop the fire more quickly than other firestopping sealants, increasing overall safety.	This intumescent is ready to be laid down, saving labor costs Flexible enough to wrap pipes so there is no need for additional products or sealants Available in rolls and pre-cut strips to reduce waste and accommodate a variety of pipe diameters and types	Fire-rated assembly through penetrations Plastic pipe in concrete assemblies Wood floor/ceiling assemblies Fluted metal decks

PUMA TECHNOLOGY

Tremco systems with polyurethane-methacrylate (PUMA) technology feature extreme durability, fast cure independent of temperature, crack-bridging, superior adhesion and abrasion resistance.

	Description	Advantages	Best For / Systems
Vulkem [®] EWS Pedestrian	A pedestrian waterproof traffic deck coating system that utilizes polyurethane- methacrylate (PUMA) technology, which is designed to protect concrete slabs and occupied areas underneath from water damage and the damaging effects of chemicals, gasoline, chloride and more. PUMA technology delivers extreme durability while maintaining its crack-bridging characteristics and eliminating the need for reinforcing fabric.	Can be applied in temperatures as low as 14° F (-10° C), extending application window Open to foot traffic within one hour after application, providing quick return to service Compatible with Tremco sealants, coatings, and expansion joints, for simplified tie-ins, detailing, and penetrations Protects against chloride, deicing salts, chemicals, gasoline, oils, and anti-freeze, keeping surfaces protected longer Unique chemistry – bonds to itself for easy repairs Low VOC to help improve surrounding air quality	Stadiums Balconies Pool decks Pedestrian walkways Mechanical rooms
Vulkem [©] EWS Vehicular	A vehicular waterproof traffic deck coating system that utilizes polyurethane- methacrylate (PUMA) technology, which is designed to protect concrete slabs and occupied areas underneath from water damage and the damaging effects of chemicals, gasoline, chloride, and more. PUMA technology delivers extreme durability while maintaining its crack-bridging characteristics.	Can be applied in temperatures as low as 14° F (-10° C), extending application window Open to vehicular traffic within one hour after application, for quick return to service Compatible with Tremco sealants, coatings, and expansion joints, for simplified tie-ins, detailing, and penetrations Minimal downtime (approximately 30 to 45 min) between application coats, ideal for condensed construction cycles, even in cold temperatures Protects against chloride, deicing salts, chemicals, gasoline, oils, and anti- freeze, keeping surfaces protected longer Unique chemistry – bonds to itself for easy repairs Low VOC to help improve surrounding air quality	Parking decks Drive lanes Helical turns Concrete ramps Ticket spitters
Vulkem [©] EWS Heavy Duty	A heavy-duty waterproof traffic deck coating system that utilizes polyurethane-methacrylate (PUMA) technology that is designed to have tenacious adhesion and extreme abrasion resistance. Ideal for waterproofing concrete slabs and protecting areas underneath from water damage and the damaging effects of water, deicing salts, chemicals, gasoline, oils, and anti-freeze.	 Maximum abrasion resistance is ideal for protecting areas with snowplows and heavy commercial truck traffic Open to vehicular traffic within one hour after application, for quick return to service Minimal downtime (approximately 30 to 45 min) between application coats, ideal for condensed construction cycles, even in cold temperatures Compatible with Tremco sealants, coatings, and expansion joints, which is essential for tie-ins, detailing and penetrations Can be applied in temperatures as low as 14° F [-10° C), extending application window Low VOC to help improve surrounding air quality 	Parking decks Dumpster areas Loading docks
Vulkem [®] EWS Specialty	A durable waterproof coating system for specialty application uses including pool decks, water features, athletic surfaces, and more. It utilizes polyurethane- methacrylate (PUMA) technology, which is designed to protect concrete slabs and occupied areas underneath from water damage and the damaging effects of chemicals, gasoline, chloride, and more.	Can be applied in temperatures as low as 14° F (-10° C), extending application window Extreme durability with exceptional crack-bridging characteristics, eliminating the need for reinforcing fabric Protects against chloride, deicing salts, chemicals, gasoline, oils, and anti- freeze, keeping surfaces protected longer Minimal downtime (approximately 30 to 45 min) between application coats, ideal for condensed construction cycles, even in cold temperatures	Pool decks Splash pads Athletic surfaces Under tile Water features
TREMproof® PUMA Waterproofing	A premium system for waterproofing concrete and protecting occupied space from water damage utilizing polyurethane- methacrylate (PUMA) technology. TREMproof PUMA waterproofing can be used in planters, flashing systems, horizontal waterproofing, vegetated roofs, and in asphalt overlays.	 Aesthetically appealing waterproofing with a variety of finish options Seamless, monolithic membrane creates an even surface Extreme durability with exceptional crack-bridging characteristics, eliminating the need for reinforcing fabric Can be applied in temperatures as low as 14° F (-10° C), extending application window 	Planters Flashing systems Horizontal waterproofing Vegetated roofs Asphalt overlay

EXTERIOR INSULATION & FINISH SYSTEMS

Dryvit is the manufacturer of Outsulation® systems, continuous insulation systems, Stucco systems, air & weather barriers, and building finishes & shapes. Now a part of Tremco Construction Products Group, Dryvit is a large contributor for Tremco's six-sided, all-in-one building products solutions.

	Description	Advantages	Best For / Systems
Adhesives & Base			
Genesis®	A fiber-reinforced, cement mixture to provide a high-build, exceptionally easy to trowel adhesive, base coat, and leveling coat. Used to adhere insulation board to substrates and as a base coat for mechanically fastened Dryvit Systems. It may also be used as a leveling coat for masonry and cementitious substrates to provide flexibility of substrates for Dryvit Systems.	Excellent durability & adhesion for long-term performance Trowels easily, thus more production 3 products in one: adhesive, base coat, and leveling coat Does not allow moisture buildup Provides flexural strengths to reduce shrinkage cracks	Insulation boards & Dryvit-approved substrates Mechanically fastened Dryvit systems Masonry Cementitious substrates
Primus®	A cement mixture to provide an exceptionally easy to trowel adhesive and base coat. Used to adhere insulation board to substrates and as a base coat for mechanically fastened Dryvit Systems. Also available as a single component, just-add-water, ready-to-use dry mix (Primus DM).	Excellent durability & adhesion for long-term performance Trowels easily, thus more production 2 products in one: adhesive and base coat Does not allow moisture buildup	Insulation boards & Dryvit-approved substrates Masonry Cementitious substrates
Rapidry® DM	A fast-setting, fiber-reinforced, cement-based dry blend adhesive and base coat for use with Dryvit Systems during colder weather. It is formulated to use when temperatures are between 35-50 °F (2-10 °C) while providing adequate working time.	Does not allow moisture build up Excellent durability & adhesion For long-term performance Can adhere EPS & base coat in The same day Ready to use, just add water frowels easily for more production Continue work during colder temperatures	Insulation boards & Dryvit-approved substrates Cementitious substrates
Coatings, Stains 8	k Finishes		
Demandit [®]	A high-performance coating with a sheen finish that employs StratoTone™ colorant technology to be offered in a multitude of standard and custom colors. Along with being stain-resistant, it contains the most effective ingredients to resist mold and mildew growth on the coating for a longer-lasting, clean, and stain-free coating.	Increased stain & fade resistance for a longer-lasting color Resistant to dirt, mold, and mildew growth Will not trap moisture vapor Applied by brush, spray, or roll for jobsite flexibility	• EIFS • Stucco • Concrete • Wood • Masonry • Metal
Reflectit®	An acrylic coating able to emulate a metal panel's appearance with significant cost savings as opposed to metal panels. This is one of our most versatile finishes with a large variety of colors, finishes, and textures.	Ability to emulate a metal panel appearance with significant savings Decreases project schedule Consistent formulas to shorten lead times Easy application for labor cost savings	New or existing Dryvit finishes
Weatherlastic [®]	A line of textured finishes utilizing DPR (Dirt Pickup Resistant) chemistry and an elastomeric binder to bridge hairline cracks. These finishes are ideal for use as a protective and decorative coat over many substrates. Available in four textures: Quartputz, Sandpebble, Sandpebble Fine, and Adobe.	Bridges hairline cracks for a seamless look Walls stay cleaner longer with DPR chemistry Walls resist mildew longer for a cleaner finish Finish lasts longer with a crack-resistant technology	• Stucco • CMU • Concrete • EIFS • Masonry
Stone, Masonry &	Quartz Finishes		
Ameristone™	A dramatic blend of natural aggregates varying in size and color, encased in a clear acrylic binder. It provides the architect and designer with a new level of durability and performance in an elegant stone finish.	10 standard colors for aesthetic versatility Excellent color retention for longer-lasting color Consistent formula for shorter lead times Greater flexibility for crack resistance and a longer life Resistant to dirt and the growth of mold and mildew	• Stucco • Concrete • Masonry
Lymestone™	Designed to replicate the appearance of limestone blocks without the cost of limestone blocks. It provides the finishing touch that adds lasting color and texture to exterior and interior walls. With DPR (Dirt Pickup Resistance) chemistry, it will remain cleaner for longer.	Inexpensively emulates realistic cut stone aesthetic Reduces the structural demands for the exterior façade Resistant to dirt and the growth of mold and mildew	Masonry Precast or cast-in-place concrete Stucco Other Dryvit-approved substrates
TerraNeo™	Offers a natural granite aggregate finish that establishes an innovative and exciting surface with distinctive features. It provides high-performance attributes that ensure a long-lasting, radiant finish to enhance the building's stature.	Inexpensively emulates labor-intensive granite 10 standard colors for aesthetic versatility Excellent color retention for longer-lasting color Consistent formula for shorter lead times Greater flexibility for crack resistance and a longer life Resistant to dirt and the growth of mold and mildew	Dryvit Exterior Insulation Systems Cement plaster Masonry Tilt-up panels Precast concrete panels
Textured Finishes			1
StucCoat™ Finishes	A high quality, integrally colored finish designed to provide texture and color. Available in four textures: Standard: a rilled texture with large aggregate Fine: a uniform sand-type texture Bold: a larger, uniform aggregate texture without rills Lace: a uniform, smooth application with a random-area trowel for a stucco-like finish.	Offers design freedom to acquire unique aesthetics Flexible and cleans up with water so the surface is easily maintainable No mixing of color or painting to save on labor costs Will not trap moisture vapor for a longer lasting finish	Cast-in-place concrete Pre-cast concrete Stucco Masonry
HDP™ Finishes	Premixed, acrylic-based finishes in a variety of standard and custom colors. Five finishes include: Quartputz, Sandblast, Sandpebble, Sandpebble Fine, and Lymestone.	Hydrophobic finishes repel dirt and water for a cleaner wall appearance Can also be used for interior applications for design flexibility Premixed chemistry for labor and time savings	Interior walls Dryvit Reinforced Base Coat Cast-in-place concrete Masonry
PMR™ Finishes	Proven Mildew Resistance (PMR) are designed to inhibit growth of mildew in difficult mildew- prone environments. Available in eight textures: Quartputz, Quartputz E, Sandblast, Freestyle, Sandpebble, Sandpebble E, Sandpebble Fine, and Sandpebble Fine E. Available in two smooth coatings: Demandit and Weathercoat.	Proven resistance to the growth of molds and mildew Ready to use; just add water to save on labor costs Frowels easily, thus more production Does not allow moisture buildup to avoid mildew Design freedom with a multitude of standard and custom colors Greater flexibility for crack resistance for a longer lasting finish	Dryvit Reinforced Base Coat Cast-in-place concrete Pre-cast concrete Stucco Masonry

EXTERIOR INSULATION & FINISH SYSTEMS

Dryvit is the manufacturer of Outsulation® systems, continuous insulation systems, Stucco systems, air & weather barriers, and building finishes & shapes. Now a part of Tremco Construction Products Group, Dryvit is a large contributor for Tremco's six-sided, all-in-one building products solutions.

	Description	Advantages	Best For / Systems	
utsulation® Sys	tems			
utsulation® estem	The original Outsulation [®] System. This system, along with other Outsulation [®] systems are more cost effective throughout their life-cycles because they continue to keep heating and cooling costs low for the life of the building.	Design options are virtually endless giving more freedom in aesthetics Gligher R values contribute to lower energy costs to head and cool a building Fiberglass mesh offered in different strengths allow for durability and versatility Quick installation and low maintenance leads to lower overall cost	• Exterior sheathing • E	xterior rated plywood xterior rated fire-retardan ywood
tsulation® us MD	An Outsulation® system that adds a second line of defense against air, moisture, and weather with Dryvit's Backstop NT and AquaFlash flashing system at all wall openings. The helps the overall system last longer and save on costs.	Includes a drainage system to drain excess water away from the wall Waterproofing flashing so water cannot get in from any wall openings Energy efficient Easy to install saving labor costs and time.	• Exterior sheathing • E • Exterior fiber-reinforced	xterior rated plywood xterior rated fire-retardan plywood trand board
tsulation® sonry Veneer stem	An EIFS system that incorporates moisture drainage, an air and water resistive barrier, and a manufactured Stone Masonry Veneer system for an aesthetic finish. This all-in-one system protects the building from air and water damage while having a great exterior appearance.	Single-source wall solution to protect against air, water, thermal, and vapor Variety of Stone Masonry Veneers allows for design freedom Enhanced energy efficiency with continuous insulation Includes a drainage system to drain excess water away from the wall	• Exterior sheathing • E	xterior rated plywood xterior rated fire-retardan olywood
tsulation® neral Wool stem	An exterior insulation and finish system (EIFS) that incorporates moisture drainage, an air/water resistive barrier, and high-performance mineral wool Continuous Insulation with an R-Value of 4.0 per inch. Outsulation® Mineral Wool System offers an engineered and cost-effective system that is built for maximum R-Value and non-combustibility.	Includes a drainage system to drain excess water away from the wall Waterproofing flashing so water cannot get in from any wall openings Energy efficient Easy to install saving labor costs and time.	Exterior sheathing Exterior sheathing	xterior rated plywood xterior rated fire-retardar lywood
itsulation® OCI	The most durable continuous insulation available today. HDCl delivers design freedom, exceptional performance, and a high level of impact resistance. With our 20-year warranty, if the lamina gets punctured, we will repair it.	If the warranted surface gets punctured, we will fix it Finhanced energy efficiency with continuous insulation Integrated air & water resistive barrier Multiple veneer finishes for different design aesthetics	Exterior sheathing pl	xterior rated fire-retardant Jywood trand board
ucco Systems				
tucCoat™ ne-Coat System	Dryvit's StucCoat One-Coat System is a complete stucco assembly for residential and commercial buildings. StucCoat One-Coat is a code-compliant assembly that may be installed over various approved sheathing surfaces. This assembly provides improved energy efficiency and higher R-values when combined with Dryvit Continuous Insulation (CI). StucCoat One-Coat is impact resistant, and may be installed as a conventional system coating (scratch & brown) complying with ASTM C926.	Improved energy efficiency leading to costs savings Higher R values Impact resistant Can also be installed as a conventional coating system for versatility Can be installed with or without foam insulation	Residential & Commercial Buildings Masonry Concrete	
odulite™ Prefabi	ricated Panel Systems			
dderlite® estem	A panel system that utilizes embedded reinforcing channels into the continuous insulation. This increases the ease of application by providing a means of panel handling and mechanical attachment to the wall.	Ultra-lightweight for easier handing and on-site installation Unique, embedded reinforcing channels provide strength and enhanced handling Can be adhered, or mechanically fastened to approved substrates	Exterior sheathing Existing facades Nudura Insulated Concrete Forms (ICF) Other ICF manufacturers	
etalite® /stem	A prefabricated panel system utilizing an Outsulation® system over a specifically designed light gauge metal frame and proprietary metal pan. This provides increased durability, water-resistance, and flexibility	Lightweight for easier handling and installation Industry-unique system Can be applied to irregular surfaces providing increased construction flexibility	Pre-engineered metal buildings Screen walls Irregular surfaces	
ıtsulite® stem	A panelized system assembled in a factory-controlled environment and creates optimal application conditions as compared to field-assembled applications. Perfect for tight jobsites that down allow much for equipment and scaffolding.	Perfect for tight jobsites - just craned and joined to the structure Particularly advantageous in cold weather Maximum insulation in a single structural system Lightweight alternative to conventional systems	Exterior cladding Window systems Exterior sheathing	
chitectural Sha	ipes			
chitectural apes	Adds a stately, classical architecture aesthetic to any building without the structural demands, material weight, labor requirement, or environmental impacts of actual stonework. Available shapes: arches, bands, columns & pilasters, corbels & dentils, cornices, custom trim & signage, panel weep, sills, specialty pieces, starter boards, trim.	All shapes are produced in 8 ft. lengths and can be cut to provide length flexibility Additional finishing options for seamless transitions and terminations Extensive colors, textures, and finishes to create the exact aesthetic for your structure	Exterior building structures Commercial construction Masonry	

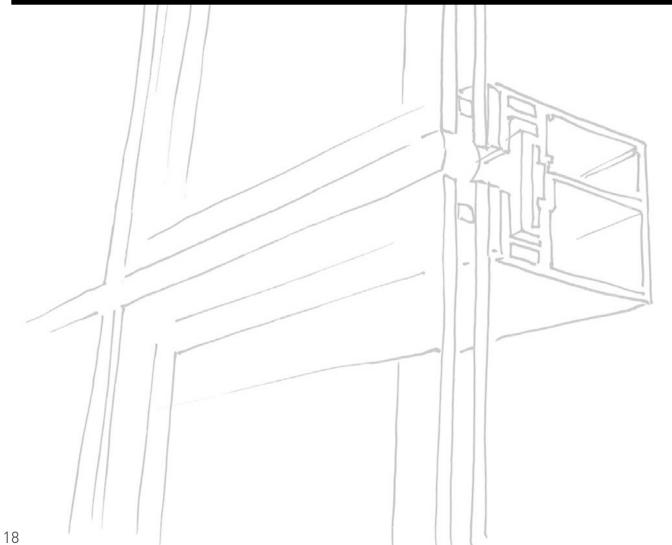

A complete line of glazing sealants and compatible gaskets, tapes, spacers and setting blocks for use in commercial curtain wall and window applications, allowing the design of integrated systems with assurance of adhesion, weatherability and durability.

Sealants	Description	Advantages		Best For / Systems	
Proglaze®	A high performance gun-grade silicone sealant ideal for in-field and in-plant glazing applications.	Produces a durable, flexible seal Moisture curing, acetoxy sealant is easily gunned in all weather conditions Selected colors (Proglaze Clear, White, Aluminum and Black) acceptable for indirect contact of edible products under USDA requirements Greenguard Gold certified for use in the most sensitive indoor environments		Glazing applications:	
Proglaze® SSG	A high modulus silicone sealant designed to meet the stringent performance needs for both 2- and 4-sided structural and protective glazing. Whether it is a unitized curtain wall manufactured in plant or a field-glazed project, Proglaze SSG offers fast through cure and exceptional tensile strength to meet the most stringent building codes.	flexibility critical to withstanding wind cycle loads and missile impacts		Structural glazing (tensile and weather bead) Hurricane/impact and blast mitigation *All structural glazing applications must be reviewed and approved by Tremco.	
Spectrem [®] 1	The ideal sealant for the most demanding dynamically moving joints. Spectrem 1 is a high-performance, ultra-low modulus silicone sealant, formulated to work with materials having a high coefficient of linear expansion.	 Excellent for sealing difficult-to-adhere-to substrates Resistance to driving rain, ozone, UV light, and temperature extremes Alduminum, metal panels Addeduction ensures safety for use in the most sensitive indoor Curtain walls 		Pre-cast concrete panels Post ExoAir membrane detailing Adhering Proglaze ETA Bonding to the HDPE facer of self-adhered membranes	
Spectrem [®] 2	A high-performance, medium-modulus silicone sealant, ideal as a single product for a variety of applications on the same job from 2-sided structural glazing to perimeter caulking and joint filling.	Medium modulus: can be used as a structural tensile bead and weather sealant Offers excellent adhesion to a variety of substrates including glass and metal		Structural glazing (tensile and weather beads) General glazing applications (toe beads, heel beads, cap beads)	Suitable for use on aluminum, glass, steel, painted metal, plastic, stone, concrete and brick Window perimeter caulking
Tremsil® 600	A fast skinning backbedding silicone sealant that cures to a flexible rubber when exposed to moisture present in the air. Tremsil 600 offers excellent adhesion to a variety of surfaces, making it ideal for multiple applications on the same job.	Excellent adhesion to a variety of substrates, including glass and metal, making it the ideal single product for a variety of applications on the same job from metal-to-metal joinery to perimeter beads Fast skinning, medium modulus silicone sealant Greenguard Gold certification ensures safety for use in the most sensitive indoor		Ideal for use as an in-plant glazing sealant for heel and toe beads, and sash joinery Compatible with most common porous and non adhesion to aluminum, stainless steel, metals, and painted surfaces Designed for application through automated gli	porous building components and has excellent glass, plastics, rigid PVCs, wood, brick, concrete
Tapes					
440 Tape	100% solid polyisobutylene cross-linked butyl, preformed sealant.			Non-compression glazing Metal-to-metal lap seats	
PolyShim® II	100% solids, cross-linked butyl preformed tape with a continuous integral EPDM shim.			Compression glazing systems Spacer for structural silicones	
SGT-900 Series	Open cell, high-density polyurethane foam tapes with a micro-cellular structure with PSA on one or both sides.			Compatible spacer for Structural Glazing Systems	
Extrusions				Typical Profiles	
Arrow-Shim	Precision extruded EPDM drive-in spacer-shims.	Controls proper spacing Recess for cap bead Uniform cushion for glass		* 1	-
Poly-Wej	Extruded in EPDM compound for use in compression glazing systems.	Compression wedge for PolyShim Tape Compression wedge for dense/dense systems		FT	T
Glazing Spline	An extruded EPDM compound for use in compression glazing systems.	Compression wedge for PolyShim Tapes and compatible gunnable sealants Compression spline for dense/dense systems)	FF
Vision Strip®	A co-extruded composite made up of EPDM rubber at the sightline and polyisobutylene, preformed butyl sealant.	Compression glazing systems Control proper glass spacing Positive wet seal between glass and metal		1	
Cellular	Closed cell EPDM extruded rubber.	Pre-set compression gasket Weatherstripping Operating vent seals			
Dense EPDM	40, 50, 60, 70 and 90 durometer Shore A extruded EPDM.	Compression wedge gaskets Weatherstripping Setting and edge blocks		> 4 ₹⊪	T
		- botting and cage blocks	Compression wedge gaskets Structural glazing back-up spacers Setting and edge blocks		
Dense Silicone	40, 60, 70 and 80 durometer Shore A extruded silicone rubber.	Compression wedge gaskets Structural glazing back-up spacers		₹ ⊪	Ů
Dense Silicone Spectrem® Restoration Overlay	40, 60, 70 and 80 durometer Shore A extruded silicone rubber. Dense rubber extrusions used for restoration applications. The patented, innovative design solution provides longlasting performance and aesthetics. Typically bonded with Spectrem 1 Silicone Sealant to provide a watertight seal. Many profile options are available depending upon existing metal requirements, custom color matching is also available	Compression wedge gaskets Structural glazing back-up spacers	Wide operational temperature range Non-corrosive and corrosion resistant Better overall aesthetic with sealant minimally visible Better long-term performance against air and water leakage		

A complete line of insulating glass spacers and sealants for residential window applications, allowing the design of integrated systems with assurance of adhesion, weatherability and durability.

	Description	Advantages	Best For / Systems
IG Spacers			
EnerEDGE® S	A pre-desiccated, ready-to-apply, cellular silicone warm-edge spacer that is suitable for a wide range of insulating glass constructions.	Optimal thermal performance and durability Reduce condensation with highest in-class desiccant loading Best-in-class adhesive to prevent spacer movement within unit	Residential IG Units: • Dual-glazed • Triple-glazed
EnerEDGE® Pro DS	A pre-desiccated, ready-to-apply, cellular silicone dual-seal or single-seal, warm-edge spacer that is suitable for the most demanding insulating glass constructions.	Flexibility for the manufacturer of IGUs due to its use in dual-seal and single-seal units Ideal for oversize units and thicker glass lites Optimal thermal performance and durability	Dual-seal application Transportable units
EnerEDGE® E	An economical, pre-dessicated, ready-to-apply, EPDM (Ethythene-propylene-diene-monomer) warm-edge spacer that is suitable for residential insulating glass constructions.	Retains thermal insulation properties for weathering and flexibility Long-term durability	Best for economical construction of high-quality glass units
IG Sealants			
EnerSEAL® 332	A butyl-based hot melt sealant, especially formulated for single and dual-seal applications in insulating glass.	Fast setting for immediate handling and timely glazing of insulating glass units Very low water vapor and argon permeability for long life and extended fill-gas retention Excellent adhesion to glass, aluminum, galvanized steel, and common foam spacer moisture barrier films	An excellent perimeter sealant for warm-edge and other spacer systems
EnerSEAL® JS680	A one-component polyisobutylene-based primary sealant, specially developed for the manufacturing of IG units.	Flexible at temperatures as low as -25°F High ultraviolet resistance Ease of use that adheres to a wide variety of substrates	Excellent adhesion to glass, aluminum, galvanized steel, stainless steel, and rigid polymeric warm-edge spacers
EnerSEAL® JS780S	A one-component PIB primary insulating glass sealant.	Flexible at temperatures as low as -25°F High ultraviolet resistance Ease of use that adheres to a wide variety of substrates	Ideally suited for use of flexible spacer systems that require a dual-seal
EnerSEAL® 340R	A reactive warm-applied sealant modified polyurethane IG perimeter barrier sealant that combines the ease of handling and speed of a single-component hot melt with the shear and heat resistance of a reactive polyurethane.	Single component and solvent free No mixing process required, hence no waste Suitable with both manual gunning and automatic applications	Excellent adhesion to glass, aluminum, galvanized steel, stainless steel, and rigid polymeric warm-edge spacers

PUWER of ONE WARRANTY

A Comprehensive System. A Single Warranty.

A building envelope from Tremco CPG companies is a comprehensive system, and its components are warranted together in a single warranty document.

We're so confident in the performance of our solutions that if any one or more elements of your Tremco CPG building envelope proves defective, we'll cover the labor and material to fix it.

Protect Your Investments.

Your property is a major investment, and its building envelope is a critical component. You get one chance to get it right... or you can spend many years and a lot of money trying to fix it.

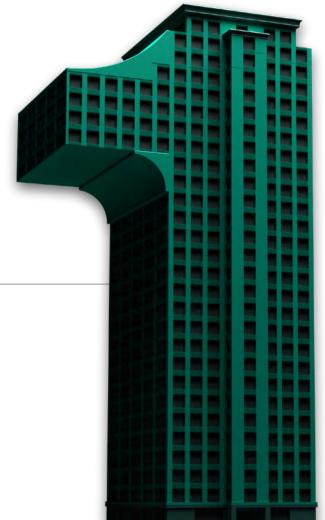

Made up of hundreds, even thousands, of components, a building's enclosure protects interior spaces and occupants from the outside world. That includes shielding against the elements, excessive noise, and providing resistance to other disturbances.

Why cobble together an envelope with materials from dozens of different suppliers when you can choose a Tremco Construction Products Group (CPG) building envelope, designed and tested to work as one continuous system and warranted together in a single document?

Systems Covered:

- Air & Vapor Barriers
- Cladding
- Glazing Systems
- Sealants & Adhesives
- Traffic Coatings

- Waterproofing
- Insulated Concrete Forms
- Engineered Framing Systems
